

## Accordion Shutters

Accordion Shutters are the easiest shutter to close and designed to cover almost any type of opening.

Accordion Shutters are permanently fastened to your home and can be easily operated by one person from inside or out. Our line of Accordion Shutters provides hurricane protection for windows, sliding glass doors or even entire balconies. Gliding on an upper and lower track, these low cost extruded aluminum shutters allow you to easily regulate the amount of sunlight entering your home. Accordion shutters can be any width, making them ideal for any application. We also custom design Accordion shutters for patios, windows, porches and decks. Our Accordion shutters are manufactured in our own facility.

### Accordion Shutters

- Our trademarked 6.8 shutters have one of the tightest blade stacks in the industry. For every foot of opening, our blades stack to one inch (including center mates), making the 6.8 accordion shutters almost undetectable to on your home.
- The 6.8 system features an offset screw boss that allows for easy lubrication of the main assembly screw and isolates the hinge to prevent corrosion, ensuring that the shutters will deploy properly after years of service.
- Our assembly screws are 410 Heat-treated Stainless Steel and are plated with a special coating called TC Ultracote. TC Ultracote increases durability and provides more than 3 times the life span over the very best screw and coating assembly from just a few years ago.
- The 6.8 track shutters are considerably heavier than our competition, which provides greater security, strength and increased longevity for your investment.
- The 6.8's locking procedure is fast and simple. While other shutter systems require up to a six-step process, ours is only two steps - engage the centers and deploy the locking device. No additional locking rods or devices required.
- Available in four standard colors - White, Bronze, Ivory and Beige. H.R. Accordion Shutters
- The 6.8 H.R. (High Rise) Accordion Shutters share the same features as the standard 6.8 system but is engineered specifically for High Rise structures, which require much higher wind loads.
- The H.R. Accordion Shutters are capable of spans up to 15' 6" in height and is tested to pressures beyond 300 psf.

### ACCORDION SHUTTER HIGHLIGHTSDURABILITY.
