

Bahama Shutters

Bahama Shutters offer good storm protection with minimal preparation.

Bahama Shutters deliver the tropical style and decorative appeal of a traditional shutter, while providing reliable protection against high winds and flying debris. Regarded as a more decorative shutter, they make the windows appear larger and give a stylish presence to residential or commercial buildings.

Aluminum Bahama shutters are mounted with a top hinge and utilize telescoping side arms for flexible movement and adjustable shade protections. Bahama shutters provide high performance storm protection and easy to operate.
